NEXT Lab on target for ACU, NCR (株), 許可. 等.

Fri, Apr 28, 2023, 2:00AM

Nuclear News

A south-facing view of the Dillard Science and Engineering Research Center at Abilene Christian University, scheduled for completion in the summer of 2023. The new facility will provide space for ACU's NEXT Lab, as well as for research in chemistry, physics, and engineering.

Abilene Christian University's Nuclear Energy eXperimental Testing (NEXT) Lab continues to make progress toward building a molten salt research reactor (MSRR) on the university's campus. NEXT Lab submitted an application for a construction permit to the Nuclear Regulatory Commission last August, and in November the agency announced it had docketed the application—the first for a new research reactor in more than 30 years.
